

SHIVAM PRADHAN

DevSecOps Engineer | Azure DevOps | Infrastructure Automation
+91 9472052351 • spbxr5168@gmail.com • LinkedIn • Immediate Joiner

PROFESSIONAL SUMMARY

DevSecOps Engineer with 3+ years of experience in cloud infrastructure automation, CI/CD engineering, platform reliability, and secure system operations across Azure and Kubernetes environments. Skilled in Infrastructure as Code (Terraform), PowerShell/Python automation, CI/CD pipelines, incident management, and secure infrastructure provisioning. Experienced in Linux/Windows administration, observability, RBAC, container orchestration, and Agile/Scrum methodologies. Proven ability to improve deployment reliability, automate operational workflows, and support highly available engineering platforms.

TECHNICAL SKILLS

Microsoft Azure Cloud: App Service, AKS, Container Apps, Function App, Key Vault, Monitor, RBAC, Managed Identity, VNet, Private Endpoints, ACR, Event Hubs, API Management, Azure Active Directory, Service Bus.

DevOps & CI/CD: Azure DevOps, GitHub Actions, Jenkins, CI/CD Pipelines, Git, Infrastructure Automation.

Infrastructure as Code(IaC): Terraform (Modules, Remote Backend, State Locking), Helm.

Containers & Orchestration: Docker, Kubernetes (AKS/EKS), Helm, HPA, Ingress, Blue-Green & Canary Deployments.

Monitoring & Reliability: Azure Monitor, Log Analytics, Application Insights, Observability Dashboards, Alerting, Incident Management, RCA, Platform Troubleshooting, High Availability.

Scripting: Python, Bash, PowerShell.

Operating Systems(OS): Windows Server, Linux.

Networking & Security: RBAC, Managed Identity, IAM, NSG, ASG, Conditional Access, PIM, Secrets Management, Secure CI/CD Practices.

Methodologies: Agile/Scrum, DevOps Lifecycle, CI/CD Practices.

Configuration Management: Git, Terraform.

Virtualization: Virtual Machine Provisioning, VMware (Basic Knowledge), PowerCLI (Learning).

WORK EXPERIENCE

Associate Consultant — DevSecOps Engineer | Seasia Infotech, Chandigarh Apr 2023 – Feb 2026

- Architected and managed Azure cloud infrastructure across 4 environments focusing on infrastructure automation, cloud operations, and performance optimization. focusing on cloud operations and performance optimization.
- Reduced operational toil by 70% through the development of reusable Terraform modules and deployment templates, eliminating manual provisioning efforts across multiple environments.
- Built end-to-end CI/CD pipelines that cut average deployment cycle time from 2 days to under 4 hours.
- Implemented secure CI/CD practices using RBAC, Managed Identity, Key Vault, and secret management controls across cloud environments.
- Automated infrastructure operational tasks using PowerShell and Python scripts, reducing manual support effort and improving deployment consistency.
- Executed reliability practices by implementing automated health checks and Blue-Green/Canary deployment strategies to achieve near-zero downtime.
- Contributed to observability dashboards using Azure Monitor and Log Analytics, reducing incident detection time from 45 minutes to under 10 minutes.
- Provided incident support and coordinated fixes for platform issues, ensuring high availability in Agile/Scrum environments.
- Supported Linux and Windows-based cloud workloads including deployment troubleshooting, access

management, and platform maintenance activities.

- Supported secure engineering platforms and cloud environments used for application development and deployment workflows.
- Collaborated with cross-functional Agile teams including developers, QA engineers, and product stakeholders to support reliable release delivery.

Software Developer Intern | Seasia Infotech, Chandigarh

Jan 2023 – Mar 2023

- Built an Employee Management System using ASP.NET Core Web API, Angular, and SQL Server; set up Azure DevOps CI/CD pipelines for automated build and deploy on Azure App Service.
- Designed RBAC policies to enforce role-based data access, adopted into the main product codebase post-internship.

KEY PROJECTS

DEVFORGE.AI — DevSecOps & Cloud Security Scanning Platform — Azure Kubernetes Service

- Deployed containerized security platforms on AKS; managed cluster health and real-time metrics through Azure Monitor for Containers and Container Insights.
- Integrated secure deployment practices and access control mechanisms for containerized workloads running on AKS.
- Optimized Kubernetes rollouts and managed infrastructure lifecycles using Azure Deployment Stacks and Terraform modules.

TRUCKLOTS — Cloud-Native Logistics Platform — Azure Container Apps + Terraform

- Provisioned full Azure infrastructure using **Terraform** and established **observability** via Azure Monitor and Application Insights.
- Automated routine tasks using runbook-based remediation for container restart and scaling events.
- Troubleshoot complex networking and DNS resolution issues for Private Endpoints using Network Watcher.

TWEETGARROT — Enterprise Operations & Management Platform — Azure Serverless

- Developed serverless analytics using Azure Functions and Static Web Apps; managed environment-specific Terraform configurations for 5 environments (Dev, QA, UAT, Demo, Production).
- Implemented Azure RBAC and Managed Identity for secure access control between Azure Functions, Storage Accounts, and Key Vault, eliminating hardcoded credentials in application workflows.
- Configured Azure Virtual Networks (VNet), NSGs, and Private Endpoints to secure communication between application components and backend services.
- Supported deployment and routing configurations using Azure Application Gateway for secure external access and traffic management across environments.
- Standardised infrastructure provisioning with reusable Terraform modules, reducing environment spin-up time by ~60%.

EDUCATION

Bachelor of Technology — Computer Science & Engineering

Aug 2019 – Jun 2023

Kurukshetra University, Haryana • CGPA: 8.12 / 10
